The Russians had survived the first winter (just barely). Now, as they attempted to rebuild their shattered army, they began to reorganize their infantry divisions. Many of the changes were geared towards using less manpower while still retaining the same fighting strength. Though some elements are motorized, the PBI (poor bloody infantry) still walks unless they are lucky enough to be crowded into the cattle car of a train for a long move. Most of the Russian front is being held by divisions just like this one, though most are seriously understrength.
